Summary

Backend-focused full-stack developer with 4+ years of hands-on experience building web and mobile applications. Proficient in Python (FastAPI, Flask), Node.js, React, Next.js and Flutter. Experienced in cloud services (Firebase, Supabase, Appwrite), REST API design, and system design fundamentals.

Technical Skills

Languages: Python, JavaScript, TypeScript, Java, Dart, C, C++, HTML, CSS

Backend: FastAPI, Flask, Node.js, Express.js, REST API Design

Frontend & Mobile: React, Next.js, Flutter, Android (Native), Tailwind CSS

Databases: PostgreSQL, MySQL, SQLite, MongoDB, Firebase Realtime Database

Cloud & DevOps: Firebase, Supabase, Appwrite, Git, GitHub

Tools & Design: Figma, VS Code, Zed

Education

Southeast University

B.Sc. in Computer Science and Engineering

- Current Result: CGPA 4.00

Dhaka, Bangladesh

May 2025 – present

Notre Dame College

Higher Secondary Certificate (HSC) in Science

- Result: GPA 5.00 / 5.00

Dhaka, Bangladesh

Jan 2022 – Dec 2023

Experience

Software Developer

Yobo AI

Ontario, Canada (Remote)

May 2025 – Mar 2026

- Architected and built a production-ready AI Voice Agent platform from scratch, developing backend APIs, frontend applications, and low-latency pipelines for AI interactions and automated order processing.
- Developed responsive restaurant and administrative dashboards using React, Tailwind CSS, and shadcn/ui, featuring multi-tenant management, call analytics, live monitoring, and operational workflows.
- Integrated Firebase Realtime Database and Twilio to support real-time order tracking, status updates, receipt printing, and seamless call transfers between AI agents and restaurant staff.
- Built a menu import system for Uber Eats using API integrations and fallback web-scraping pipelines to handle complex menu structures.
- Led the migration from Firestore to Supabase (PostgreSQL), improving data integrity, scalability, and maintainability.

Software Developer Intern

Yobo AI

Ontario, Canada (Remote)

Oct 2024 – Apr 2025

- Migrated a large-format kiosk app from vanilla JS to React, modernizing order-taking and customer queries.
- Delivered new customer-facing features post-migration to enhance the kiosk experience.
- Optimized the React-based client dashboard for kiosk configuration, boosting usability and performance.
- Added dashboard features to streamline configuration workflows.

Leadership

Secretary, Department of Web & App Development

Dhaka, Bangladesh

Notre Dame Information Technology Club (NDITC)

Apr 2023 – June 2024

- Built the official Flutter mobile application to engage 300+ club members in events and activities
- Led a web development team to deliver the official club website, improving the club's online presence
- Architected and developed the official NDITC REST API using Python Flask and SQLite, serving both the mobile app and website
- Developed the API admin panel using React and Bootstrap, enabling non-technical staff to manage content independently

Projects

Robo Arm Simulator [↗](#)

June 2026

- Built a browser-based 6-DOF robotic arm simulator and control suite using TypeScript, featuring real-time inverse kinematics and interactive 3D visualization.
- Designed an intuitive control panel for manipulating joint angles, end-effector positioning, and pre-programmed motion sequences.

Office Energy Monitor [↗](#)

Apr 2026

- Developed a real-time office energy monitoring system with a live web dashboard and Discord bot, tracking electrical devices (fans, lights) across all office rooms.
- Built the monitoring backend and bot integration using TypeScript, enabling instant status queries and alerts through both web UI and Discord commands.

Product Review Hub [↗](#)

May 2026

- Built a full-stack product review platform using Next.js, FastAPI, and PostgreSQL, enabling users to browse products, submit star ratings, and write reviews.
- Implemented an admin catalog management system with role-based access control and a responsive review moderation workflow.

Roots AI

June 2026

- Built the MVP using Next.js 16 and Gemini, featuring a "Concept MRI" diagnostic engine that identifies knowledge gaps and maps unmet prerequisite concepts.
- Developed multimodal learning features, including image-to-problem conversion and voice-based Feynman Technique assessments to verify student mastery.

Landsat Lens [↗](#)

Nov 2025

- Developed a real-time satellite tracking and visualization platform using React, TypeScript, and Flask, integrating NASA/USGS M2M APIs, interactive GIS overlays (Leaflet/ESRI), and high-resolution reflectance data visualizations.
- Co-authored a predictive notification system using Python and Skyfield to perform orbital mechanics calculations and alert users of upcoming satellite overpasses.

NDITC Official Mobile Application [↗](#)

Jan 2023

- Engineered the official cross-platform mobile application using Flutter, enabling real-time event tracking and member engagement for a 300+ person organization.
- Architected and developed a supporting REST API using Python (Flask) and SQLite to handle announcements, executive profiles, and project showcases.
- Integrated Firebase Cloud Messaging (FCM) to deliver critical push notifications, improving member response time for club activities.

AIDE Assistant *Jan 2021*

- Created and published a native Android utility (Java) that gained significant organic user traction by solving specific mobile development pain points.
- Designed specialized tools for on-device code manipulation and development workflow optimization, specifically for low-resource environments.
- Managed the end-to-end lifecycle from initial prototyping to public release and maintenance on third-party application stores.

Sudo WhatsApp Bot *Jan 2026*

- Developed a modular WhatsApp automation engine using TypeScript and whatsapp-web.js, featuring a plugin-based architecture for 20+ utility commands.
- Built a multi-provider AI fallback system integrating OpenAI and OpenRouter to maintain 99.9% availability for natural language processing features.
- Implemented automated scheduling for university-specific reminders and Islamic prayer times using cron-based systems and external API integrations.

Amazon Niche Finder *Apr 2026*

- Engineered a high-concurrency Python CLI tool using Playwright and BeautifulSoup4, reducing manual market research time by over 90%.
- Developed a multi-factor scoring algorithm to rank keyword profitability based on competition metrics, sales trends, and Google Trends data.
- Implemented recursive keyword exploration and semantic clustering to generate metric-backed "Profitability Rationales" for SEO optimization.
